PROFILE

I am currently pursuing my B. Tech in Information Technology. Having practical hands-on experience developing and implementing web applications that are responsive, built with HTML5, CSS3, JavaScript (ES6+), Node.js, and AngularJS. Recently developed a website for an NGO located in Mumbai with a deadline of 2 weeks; was able to cut down the amount of effort required to update content on the site by 90% using the Google Sheets API.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JS ES6+, AngularJS, Tailwind CSS, Responsive Web Design, Cross-Browser Compatibility

Backend: NodeJS, PHP, Python, REST APIs, API integration, Object-Oriented Programming

Databases: MySQL, SQL, Database Modelling

DevOps & Software: GitHub, Linux, Bash Scripts, Figma, VSCode

Computer Science: Data Structures & Algorithms, OOP, Computer Networks, OS

Networking: Cisco Packet Tracer, DHCP, SSH, ICMP

WORK EXPERIENCE

Web Developer Internship | United Way Mumbai | June 2025 – July 2025

- Created a responsive NGO website using HTML5, CSS3, and JavaScript within a two-week timeframe, thus increasing the accessibility of digital content by 10-50 staff members.
- Successfully incorporated Google Sheets as a live CMS through API, resulting in a decrease of time needed to update content from 30-60 mins to less than 5 minutes per update, a significant 90% reduction, thus giving non-technical staff the ability to update their live data without technical knowledge. Creating automation scripts using Python and Bash, which saved the team up to 3 hours weekly from having to enter repetitive data manually.
- Taken full responsibility in making all technical decisions when deploying the website, collaborating with program and communications teams to ensure proper integration of web content.

PROJECTS

Ocassio – Event Management Website – HTML, CSS, Node.js, AngularJS

- Created an automated pipeline for sending personalized HTML ticket emails via a REST API endpoint at /sendTicketEmail after payment confirmation with data validation and error-handled logging.

- Created a highly scalable backend using Node.js that could process a high volume of tickets using event handling.

NGO Activities Dashboard & Biodiversity Tracker — HTML, CSS, PHP, MySQL

- Created a web-based activity tracker for NGOs with dynamic SQL queries and auto-generate detail pages for activities organized by category.
- Created a delete sync for data, files, and images, ensuring synchronization without needing to manually perform deletions.
- Created a biodiversity tracker for storing content for editing and displaying it with slideshows using a MySQL database.

Portal — HTML, CSS, Backend

- Created a dual interface-based portal for accessing project dashboards based on roles using login credentials.

Hotel Management Network — Cisco Packet Tracer

- Created a multi-building hotel network comprising 2-3 buildings having a common static IP-based WIFI system with ICMP packets traceability to ensure communication through all systems.

School Management Network — Cisco Packet Tracer

- Created a campus network consisting of 2-3 buildings through the use of protocols such as DHCP, SSH, and ICMP.

EDUCATION

Bachelor of Technology - Information Technology (Integrated)

Mukesh Patel School of Technology Management and Engineering, NMIMS

Coursework relevant to this major: Data Structures and Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object Oriented Programming.
